

locanis silwa is a flexible warehouse management and manufacturing execution system. This combination enables the input of loading data in real time and tracking of the entire flow of goods from receipt to final shipment. Automatic loading control and real-time visualization of the loading plan are only a few of many useful functionalities.

locanis silwa is designed to be easily connected to any ERP or production control system available today.

locanis intelliGence

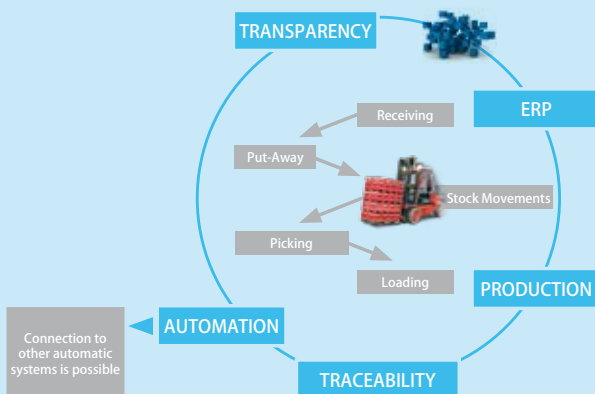

Economic Benefits

- Consistent transparency from production to loading
- Maximum use of storage space
